Allowable Subject Matter

1. Claims 1-7 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present relates to a data demodulation apparatus and method, and more particularly to a data demodulation apparatus and method which uses a Viterbi decoding process to discriminate the data rate of receive data at a high speed. Prior art of record, taken individually or collectively, fails to fairly teach such method and apparatus, as claimed, including the claimed subject matter "end bit position discrimination data extraction means for successively extracting end bit position discrimination data which are obtained at end bit positions of the data rates when the receive data are successively Viterbi decoded beginning with the top by said Viterbi decoding means; and data rate discrimination means for discriminating the data rate of the receive data based on the end bit position discrimination data successively extracted by said end bit position discrimination data extraction means" in independent claims 1 and 7 (claims 2-6 depend therefrom). Thus, claims 1-7 are found to be novel and unobvious over prior art of record.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
